

FIRST STATE GLOBAL LISTED INFRASTRUCTURE FUND

Monthly Update

April 2019

Market review

Global Listed Infrastructure gained in April on solid earnings results, a brightening global economic outlook and dovish central bank commentary. The FTSE Global Core Infrastructure 50/50 index rose +0.7%, while global equities^ ended the month +3.5% higher.

The best performing infrastructure sector was Ports (+5%). Dubai-based DP World (+23%, not held) rallied on news of a planned US\$3.4 billion Chinese investment into two storage and export facilities within the emirate. Airports (+3%) were supported by stronger than expected March passenger growth. However a profit warning from Germany's largest airline Lufthansa, citing higher fuel costs and European over-capacity, implied that growth rates still face headwinds over the medium term.

The worst performing sector was Gas Utilities (-2%). A proposal to cap the new customer connection fee that utilities are allowed to charge as part of a government drive to encourage a switch from coal to natural gas, weighed on Chinese operators. Towers (flat) paused for breath following a sustained period of share price outperformance.

The best performing region was Europe ex-UK (+3%), where airports, ports and toll roads were buoyed by improving economic data and a supportive European Central Bank (ECB) stance. The worst performing region was Japan (-7%), ahead of its extended Golden Week public holiday. The country's electric utilities (screened out of our Focus List) underperformed on reports that some nuclear reactors may be shut, owing to a failure to meet anti-terrorism safety standards.

Fund performance

The Fund returned +1.2% after fees in April¹, 57bps ahead of its benchmark index.

Annual Performance (% in GBP) to 30 April 2019

Period		12 mths to 30/04/2018			
First State Global Listed Infrastructure Fund B GBP Acc	16.05	-2.55	27.33	6.33	19.04
FTSE Global Core Infrastructure 50/50 Index Net TR GBP*	18.68	-1.37	25.25	4.32	17.86
MSCI World Net Total Return Index GBP	12.50	6.35	29.82	0.53	18.02

These figures refer to the past. Past performance is not a reliable indicator of future results. For investors based in countries with currencies other than the share class currency, the return may increase or decrease as a result of currency fluctuations.

Performance figures have been calculated since the launch date. Performance data is calculated on a net basis by deducting fees incurred at fund level (e.g. the management and administration fee) and other costs charged to the fund (e.g. transaction and custody costs), save that it does not take account of initial charges or switching fees (if any). Income reinvested is included on a net of tax basis. Source: Lipper IM / First State Investments (UK) Limited.

*The benchmark changed from the UBS Global Infrastructure & Utilities 50-50 Index on 01/04/2015.

The best performing stock in the portfolio was US east coast freight rail company Norfolk Southern (+9%). The company announced better than expected earnings for the March quarter, with rising haulage volumes and improving service metrics. US west coast peer Union Pacific (+6%) also delivered positive earnings numbers. Headcount was reduced by 4% and average train length increased by 7% during the March quarter - further evidence of Precision Scheduled Railroading driving operational improvements.

RISK FACTORS

This document is a financial promotion for First State Global Listed Infrastructure Fund for professional clients only in the EEA and elsewhere where lawful. Investing involves certain risks including:

- The value of investments and any income from them may go down as well as up and are not guaranteed.
 Investors may get back significantly less than the original amount invested.
- Currency risk: changes in exchange rates will affect the value of assets which are denominated in other currencies.
- Single sector risk: investing in a single sector may be riskier than investing in a number of different sectors. Investing in a larger number of sectors helps spread risk.
- Charges to capital risk: the fees and expenses may be charged against the capital property. Deducting expenses from capital reduces the potential for capital growth.
- Listed infrastructure risk: investments in infrastructure may be vulnerable to factors that particularly affect the infrastructure sector, for example natural disasters, operational disruption and national and local environmental laws.

Reference to specific securities or companies (if any) are included to explain the investment strategy and should not be construed as investment advice, or a recommendation to invest in any of those companies.

For a full description of the terms of investment and the risks please see the Prospectus and Key Investor Information Document.

If you are in any doubt as to the suitability of our funds for your investment needs, please seek investment advice.

¹ Performance is based on OEIC B share class, net of fees, expressed in GBP.

[^] MSCI World Net Total Return Index, GBP.

European transport infrastructure performed well. Spanish-listed AENA (+8%), Europe's largest airport operator by number of passengers, announced robust March quarter earnings and upgraded guidance for traffic growth in calendar 2019 from ~2% to ~3.7%. Vinci (+6%) achieved better than expected revenue growth from its toll road concessions, and announced healthy +6.4% passenger growth at its airports. Strong growth at its Portuguese airports reflected the country's popularity as a tourist destination. Global concession, construction and services company Ferrovial (+5%), which owns a 43% stake in Toronto's 407 Express Toll Route, gained after fellow owner SNC-Lavalin sold its 10% stake in 407 ETR to Canadian pension fund OMERS. The higher than expected C\$3.25 billion sale price provides a useful valuation marker.

In the Pipelines space TransCanada (+7%) gained after an election victory for the energy sector-friendly Liberal party in Canada's western Alberta province; and the issuance of two new US presidential executive orders aimed at supporting pipeline infrastructure development. Reports that TransCanada was seeking to sell midstream assets acquired as part of its 2016 takeover of Columbia Pipeline Group to help fund new, higher growth projects also buoyed sentiment towards the stock. Magellan Midstream Partners (+2%) climbed ahead of its March quarter earnings announcement, on the appeal of its ~7% dividend yield and track record of stable earnings growth.

The worst performing holding in the portfolio was COSCO Shipping Ports (-8%) which gave up YTD gains after healthy 5% volume growth for the March quarter failed to translate into profit growth. UK utility SSE (-4%) lagged as it continued to seek a buyer for its energy retail business segment, which supplies almost 6 million British households but faces a challenging operating environment. The sale of this business would enable SSE to focus on renewables generation and its energy transmission and distribution assets.

The portfolio's Japanese holdings underperformed as investors reduced exposure to the wider market ahead of a 10-day Golden Week holiday period. Indications of mounting competitive pressure weighed on Tokyo Gas (-6%) and Osaka Gas (-6%). Passenger rail companies East Japan Railway (-2%) and West Japan Railway (-1%) fared better after reporting steady earnings numbers, and on the view that the 2019 Rugby World Cup and 2020 Tokyo Olympics could provide small tailwinds to passenger volumes in coming months.

Fund activity

The Fund initiated a position in CenterPoint Energy, a regulated electric and gas utility whose primary business is a high quality electric utility in the constructive regulatory jurisdiction of Texas. The company owns utilities in seven other US states, as well as a stake in energy infrastructure company Enable Midstream Partners. Earnings are forecast to grow at 5% - 7% per year between 2018 and 2023. Share price underperformance, owing to a mixed market reaction to the terms of its recent acquisition of smaller peer Vectren, presented an appealing entry point to these core infrastructure assets.

The Fund also bought shares in Chinese gas utility ENN Energy, which supplies natural gas to retail, commercial and industrial customers across mainland China. The stock has lagged peers and the broader market over the past year, pushing valuation multiples well below their historic average range. We believe the market is over-estimating the potential risk of government-mandated connection fee cuts; and under-estimating the strong growth trajectory of the Chinese gas distribution market, which is being driven by a national clean energy drive, rising urbanisation and growing market penetration.

Market outlook and Fund positioning

The Fund invests in a range of global listed infrastructure assets including toll roads, airports, ports, railroads, utilities, pipelines, and wireless towers. These sectors share common characteristics, like barriers to entry and pricing power, which can provide investors with the potential for inflation-protected income and strong capital growth over the medium-term. The portfolio is positioned to take advantage of a number of investment themes:

- In several cases, stock-specific events have caused short term investor sentiment to overshadow positive longer term company fundamentals. Undervalued businesses with improving quality outlooks and the potential to reward patient investors include Dominion Energy and Atlantia
- (2) We are attracted to companies taking pro-active steps to streamline operational efficiency and improve business profitability. Self-help stories within the portfolio include Union Pacific and Aurizon.
- (3) Some portfolio holdings have opportunities to sell or are already engaged in the sale of non-core assets at premium prices. As businesses simplify and improve, valuation multiples are likely to expand. TransCanada and Ferrovial are positioned to benefit from corporate restructuring strategies.
- (4) We believe it is important for companies to be in a stable financial position at this late stage of the economic cycle. Examples of portfolio holdings whose robust balance sheets are currently under-appreciated by the market include Portland General Electric and Tokyo Gas. We believe this prudent approach will be rewarded if the broader economic backdrop deteriorates.
- (5) The final portfolio theme relates to companies with the ability to grow earnings at a faster rate than the market currently expects. Companies that we believe have under-appreciated growth optionality include Transurban, CCR and Eversource Energy.

We think these themes have the potential todeliver strong risk-adjusted returns to investors over the long-term.
